Recombinant Human VEGF165 Protein

Catalog Number: TL-612

Product name	
Generic names	Recombinant Human VEGF165 Protein
Gene Name Synonym	MVCD1, VEGF, VEGF16, VPF

Product information	
Construction	A DNA sequence encoding the human VEGF165 (NP_001165097.1) was expressed with a polyhistidine tag at the C-terminus.
Source	Human
Expression Host	HEK293 Cells
QC Testing Purity	> 90 % as determined by SDS-PAGE
Bio Activity	Determined by the dose-dependent stimulation of the proliferation of human umbilical vein endothelial cells (HUVEC) using a concentration range of 1.0-8.0 ng/ml.
Endotoxin	< 0.1EU per μg of the protein as determined by the LAL method.
Molecular Mass	The Recombinant Human VEGF165 consists of 193 amino acids and predicts a molecular mass of 22.3 KDa.
Formulation	Lyophilized from sterile PBS, pH 7.4. Normally 6 % - 8 % trehalose, mannitol are added as protectants before lyophilization.
Stability & Storage	Samples are stable for up to 24 months from date of receipt at 4 ℃. Recommend to aliquot the protein into smaller quantities for optimal storage. Avoid repeated freeze-thaw cycles.

Background

VEGF is a potent growth and angiogenic cytokine. It stimulates proliferation and survival of endothelial cells, and promotes angiogenesis and vascular permeability. Expressed in vascularized tissues, VEGF plays a prominent role in normal and pathological angiogenesis. Substantial evidence implicates VEGF in the induction of tumor metastasis and intra-ocular neovascular syndromes. VEGF signals through the three receptors; FMS-like tyrosine kinase (flt-1), KDR gene product (the murine homolog of KDR is the flk-1 gene product) and the flt4 gene product.
